Cementing is the process of displacing drilling fluids with cement. Among the many challenges cementing companies face are mud channeling, poor casing standoff, loss of circulation, unmanaged high temperature, etc. Since 2000, Pegasus Vertex, Inc. (PVI) has been involved in research and development of cementing software. Our award-winning and integrated cementing software CEMPRO+ has evolved from a simple hydraulics program to a comprehensive package covering casing centralization, circulating temperature, displacement efficiency, surge and swab, torque and drag, HTHP, foamed cement, and job evaluation.

CEMPRO+ offers the industry a better understanding of fluid displacement, it helps our engineers make informed decisions regarding the placement and minimizes risk throughout the well's life. It provides a platform for both service companies and operators to ensure a successful cementing job by putting all parties on the same page. The successes of CEMPRO+ stem from the combination of PVI’s technical strengths in engineering modeling and collaboration with industry leaders of cementing operation. Our goal is to work collaboratively with our customers to design and deliver the best, sophisticated yet simple cement job software in the market.

To cater the needs of our users, PVI has developed two different versions of CEMPRO+

- CEMPRO+ with Centralizer Calculation
- CEMPRO+ without Centralizer Calculation
CEMPRO®—Cementing Job Model

Engineering Features
- Job designs for all the casings in a well
- 20 casings, with 10 cases for each casing
- 16 fluids and 40 stages for each design case
- Land well, offshore and deep water
- Inner string
- Tieback
- Multi-stage cementing job
- Forward or reverse circulation
- Gas flow potential
- Casing centralization*
- T & D for casing running and cementing
- Lost circulation
- Automatic pump rate calculation
- Temperature prediction
- Pre-job circulation
- HTHP rheology and density
- Displacement efficiency
- Foamed cementing
- Job evaluation
- Circulation sub
- Thickening time
- Coiled tubing
* Only available in CEMPRO® with centralizer calculation version

Usability Features
- Casing wizard
- Fluid wizard
- Pipe diameter input in fraction format
- Survey data import
- 3D well visualization
- Zone of interest estimation
- Fluid compressibility
- Caliper log input
- Fann viscometer readings
- Choke pressure input
- Cement material balance
- Wellbore, casing and fluid schematics
- Annular contact time for all fluids
- Turbulence table
- Fluid displacement animation
- Microsoft Word® Input
- CEMLab data import
- Customized graph output
- Top and bottom plugs
- Balanced fluid positions
- Open hole excess sensitivity analysis
- Oil field, SI and customized units
