

How to fix a Crashed Database

1. Close the error message window then close MUDPRO software.
2. Delete the crashed database file :
go to C:\Users\XXXX\Documents\MudproDatabase\ and find the file "MudproData.sdf ", then delete it. (XXXX indicates the current system user's name)
3. Find a previous database file:
Open "Backup" folder and find the most recent modified file "MudproDataxxxx.Bak", right-click on it and select "Copy". (xxxxxx indicates the date that the backup file was created)
4. Make a copy
Go back to C:\Users\XXXX\Documents\MudproDatabase\ and right-click and select "paste"
5. Change file name.
Change the name of the copied file to "MudproData.sdf". You will get a message like below, select Yes.

6. Run MUDPRO.
After all is done. Double-click the MUDPRO icon on your desktop to launch to MUDPRO.

Please note that, by doing this, any data you have input after the backup will be missing.

If the problem still exists, then repeat all steps, and in Step 3, use the second recently modified backup file.
